CSA3114 - Software testing

CO1-AT3 - MCQ

Mathusri P
192311363

1. a) Predicting issues
2. b) Product reliability
3. b) improve testing strategy
4. b) Redendant tests
5. b) Experience - based
6. c) Store defect details
7. b) Requirement defect.
8. b) Organized testing
9. b) Core funtionality
10. b) Testing as an engineering activity
11. b) Design defect.
12. b) UI defect
13. b) Team work
14. b) Executing test case systematically
15. b) Process - driven testing
16. b) High coverage
17. b) validation
18. b) Improve quality
19. b) Organize defects?
20. b) Tester's responsibility
21. a) External behavior

22) a) functional do
23) b) Earlier phase issues
24) b) Transability
25) c) Typo error
26) b) Testing Efficiency
27) a) Efficiency in Testing
28) b) Process gap
29) b) Test Execution
30) b) Test Design technique
31) b) user requirements
32) b) Performance defect
33) b) Prevent recurrence
34) b) Ensure times work
35) b) objectivity
36) b) Increased defect in production
37) b) structured testing
38) b) Poor traceability
39) a) Detect cost
40) b) Early defed detection
41) b) Requirements Phase
42) b) Prioritize fixing
43) b) Exhaustive testing
44) b) Consistant Quality
45) a) Reduce defect cost
46) b) Software Quality Process
47) b) Maintanance Cost
48) b) Defect clustering principle
49) b) Rule-based testing
50) c) Security defect
51) c) Coding defed
52) b) improved software quality
53) a) Functional defect
54) b) Detect edge-case defects
55) b) Fix prioritization
56) c) Developer fix quickly
57) b) Tester
58) b) Poor Process
59) b) Coding Defect
60) b) Cooling defect
